## The Power of Innovation Grips the WBM Client Community

### **Connection 2014 • Friday September 26th TCU Place • Saskatoon, SK**

In Western Canada, IT organizations are now stepping beyond the traditional, and moving into the forefront of innovation.

Pushed by evolving business needs, the challenge is to harness the power of innovation in the solutions we are delivering, and the approaches we are taking all while nurturing change and mitigating risk.

This year's event, The POWER of INNOVATION, brought 400 business leaders, IT professionals, and executives from across the country together to celebrate what is fast becoming one of Canada's most dynamic and diverse IT groups.

The day moved us from the latest in wearable mobility, to HP's best in class technology innovations, and the opportunity that each of us holds to deliver innovation in the form of support, process, structure, and partnerships.

And finally, the greatest opportunity of all as the community came together to build 50 bicycles for some truly amazing kids.
